

### PERFOSET E/P, ES/P

#### Electric Embossing Machines

For securing official documents or photographs in passports; also for embossing certificates, sheets of writing paper, business cards, etc. without applying any physical force.

Our electric embossing machines were designed for satisfying high demands. Even in more solid materials like cardboard or pasteboard and with bigger embossing stamps you will easily obtain needlesharp impressions.

The insertion depth is ca. 105 mm from the paper edge to the center of the impression.

In order to enable exact positioning of every imprint on its corresponding forms, the machines are by production-line supplied with adjustable stops for side and depth.

The upper stamp is engraved in brass or steel.

The lower stamp is made of plastic.

### PERFOSET E/P

A very robust, electrical embossing machine for office use.

Stamp diameter can be up to 75 mm.

The embossing is released by pressing a push button on the side of the machine.

### PERFOSET ES/P

This electrical high-performance machine is supplied production-line with an especially strong [gear unit in order to enable mass embossing and continuous operation. It meets highest demands.

Stamp diameter can be up to 80 mm.

The embossing is released by pressing a pedal which is supplied by standard.

PERFOSET ES/P is one fixed unit on metal stand.

#### Important

In order for the imprint to appear legible in the appropriate place on your forms, please include relevant information in your order.
